FEATURES

4RB2: Japanese technology developed by XCE together with DELPHI and UAES, which is integration of international advanced technology and domestic utilization demands.

G4BA: Specially designed for MPV, SUV with 2.7L displacement, low rotational speed, great torque. It adopts low noise chain, no clearance gear transmission technology and double balance shaft structure, which effectively weakens the engine vibration and noise.

DK-5: Developed with Japanese engine technology coupled with established German fuel supply Control System. With these technologies working in synchronization, the end product has gained traction internationally. It's the high-end light duty diesel engine with high pressure common rail system which realized Euro-III/IV emission.
